

CS 455
Program #6
Ray Tracing

Dr. Egbert

For this program you will extend the ray-tracer you wrote in Program 5. Adding the capabilities of this assignment will allow you to generate images that are really quite good. The additional capabilities you need to add to your ray tracer are:

1. The ability to ray trace polygons.
2. The ability to handle a single shadow ray per intersection.
3. The ability to trace reflection rays at intersections.

As with program 5, we will give you two test scenes that you need to render. In addition, you will need to render a scene that you create which is more complicated than the ones we give you. Make the scene you create fun and interesting. This may be the culmination of your ray tracing career, so make it good!
